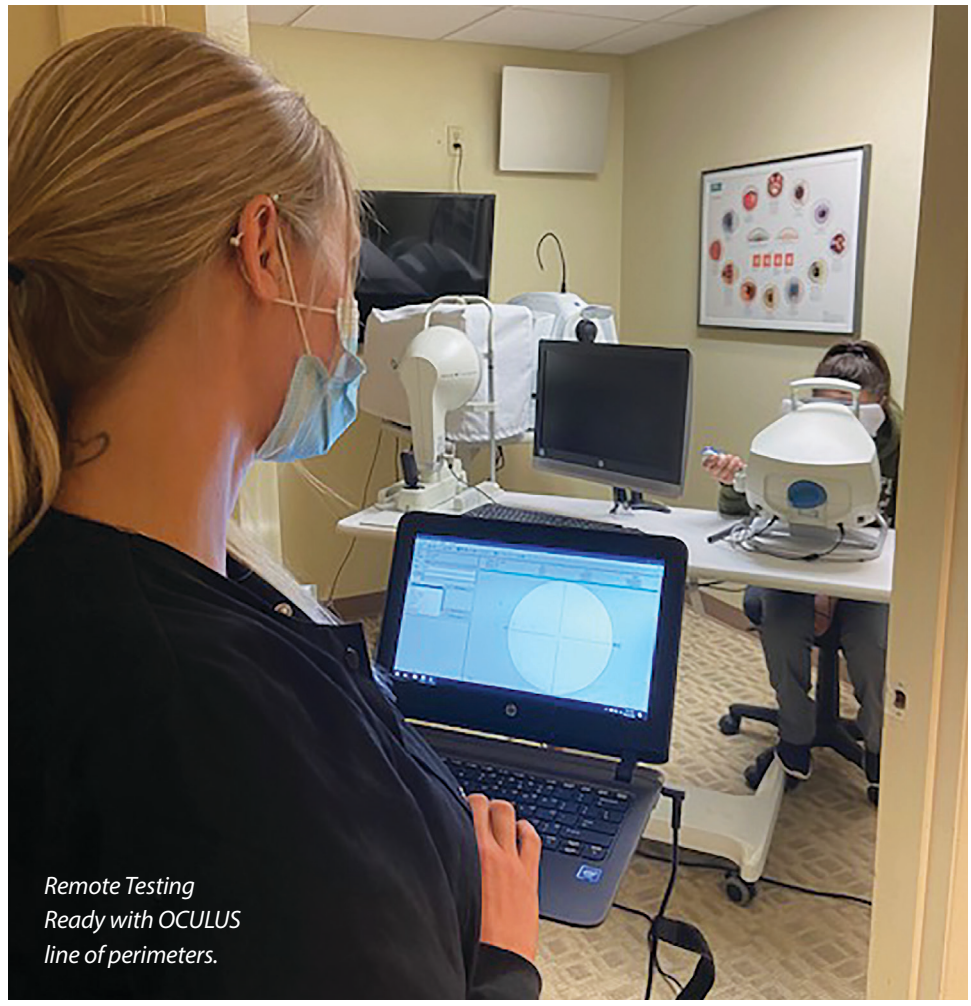
SAFE AND SOUND PERIMETRY THE OCULUS WAY!

As a result of the COVID pandemic, the very nature of patient interactions within ECP practices is being assessed and evaluated in a whole new light. Patient testing, as well as the pre-testing rooms, are an integral part of this renewed scrutiny of the complete patient practice experience. One testing experience which is already exhibiting a streamlined approach is visual field testing the OCULUS Way.



Remote Testing Ready with OCULUS line of perimeters.

√ Remote Testing Ready

The OCULUS Smartfield, Easyfield® and Centerfield® 2 line of perimeters can be efficiently operated at a safe distance from the patient via a small laptop. Therefore, the ECP technician does not have to stand adjacent to the patient and device utilizing an embedded computer found frequently in many bowl perimeters.

√ Expedite throughput with Fast Testing

OCULUS perimeters provide the visual field results you need so the patients move quickly through the clinic. Flexible testing programs, patterns and strategies enable screening results in 1 minute per eye and glaucoma threshold results in 3 minutes per eye. The Easyfield® is now available (and more affordable) as a visual screener model.

√ Easy Device Disinfection

The OCULUS Smartfield, Easyfield® and Centerfield® 2 line of perimeters are enclosed bowl perimeters and therefore, DO NOT have any "open bowl" that patients may cough or sneeze into. Confidently move on to your next patient after disinfection of the contact points of the chin rest, forehead rest and the bowl-lens.

√ No Eye Patch, No Problem (and No Disinfection)

The OCULUS Easyfield® and Smartfield feature integrated translucent eye shields to replace the eye patch. Simply said, it's one less contact point with the patient and one less disinfection step to expedite safe flow through the clinic!

OCULUS®
